AWS Well Architected Review

Mode2 delivers an assessment and custom recommendations using Amazon Web Services' Well Architected Framework. We analyze a workload of your choice against AWS and Mode2's best practices, and within 48 - 72 hours, you will receive our recommendations report.
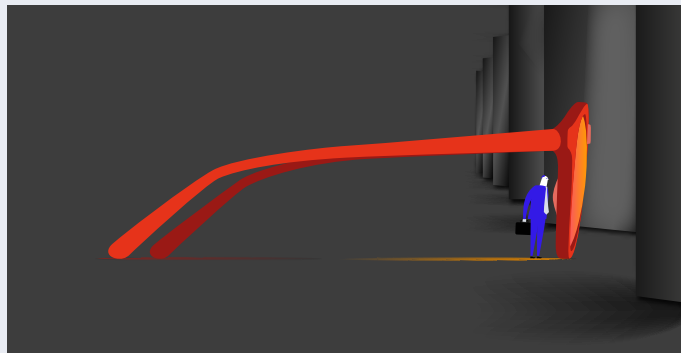

Fact-finding and interviews

To kick off the Well-Architected review, Mode2 will make requests for information, such as IAM user and roles, based on the chosen workload. We will also spend time (onsite or virtually) with the relevant teams behind the workload to walk through a structured set of questions.

Automated data collection

In addition to the interviews, we may perform secure, automated data collection on your existing architecture to pull information such as AWS APIs.

Review and remediation

Based on the review's findings, we will provide guidance on the eligibility and application for service credits from AWS to offset some of the costs of remediation. Once the review is complete, AWS will send a satisfaction survey for your completion.

Recommendations report

Mode2 uses the five pillars (Operational Excellence, Security, Reliability, Performance Efficiency, Cost Optimization) established in the AWS Well-Architected Framework and supplement with our best practices for designing, deploying, and architecting your workload. The report will cover the current architecture's strengths as well as our recommended remediation actions prioritized by criticality.

Who is this offer for?

Companies that want a zero-cost, third-party review on a workload based on the AWS Well-Architected Framework

Teams who want to benefit from $5,000 in AWS service credits

aws partner network

Contact us at (800) 891-3132 or sales@mode2.com to review your architecture with us.
