Get Started

Cloud Native Business Case Development

Our study creates a detailed justification for your migration to Serverless. We validate architectures and costs for existing applications, and develop a customized business case rationale for replatforming your software to AWS native services.

Profile applications

We start by understanding the project context and what your goals are, what you're using today, and appreciating any unique challenges. Mode2 consultants use tools to collect metadata about the current software, processes, users and data.

Map to Cloud Native

Mode2 architects establish designs and patterns for replatforming the software, mapping the applications to our cloud native reference architectures. We highlight the option for enhancements to user experiences with AI, IoT and natural language services.

Create the TCO models

We work with our clients finance teams to create a like-for-like comparison between current costs and a cloud native solutions across the build, operate and maintain phases. We highlight the business benefits for making the changes, and package the recommendations.

Effort to Modernize

Based on our joint analysis, we estimate the effort and resources required to redevelop existing systems and take advantage of new cloud features. We assess the risk and complexity of the project, and deliver a confidence factor in the business case rationale.
