Discovery Day: AWS Mobile With Serverless Backends

This Discovery Day is an onsite workshop showcasing AWS Mobile Services and examples of how to build mobile applications with new superpowers to amaze users and grow the business.

Learn about AWS mobile solutions

Explore solutions that include building with SDK's, testing apps across handsets and platforms, analyzing mobile app usage data, and engage users with targeted campaigns and messaging.

Review end-to-end examples

We walk you through the components for building a modern mobile application with a Serverless backend using a sample project and a hands-on labs approach.

Explore Serverless backend services

We demonstrate how to enhance mobile apps with cloud processing, how to build REST microservices using AWS Lambda & API Gateway, and GraphQL API's with AppSync.

Whiteboarding on new projects

Building upon earlier examples, we discuss how to integrate these solutions into existing mobile applications, or how to architect new solutions with AWS Mobile and Serverless.

Who is this offer for?

Startups, SMB's and Enterprises doing mobile development projects.
Companies building new mobile-first applications.
In-house development teams exploring modern architectures.
