Get Started

Discovery Day: Born in the Cloud Workloads

This is an onsite workshop where we review how to build cloud native workloads with advanced cloud capabilities that empower users and grow the business.

Rich interface for users

Learn how to implement rich user interactions on AWS with chatbots using Lex, text-to-speech with Polly, speech-to-text using Transcribe, Alexa skills for voice control, image and video analysis with Rekognition, and natural language processing with Comprehend.

Predictive Analytics with Machine Learning

Mode2 demonstrates how to apply machine learning solutions to process data centrally on the cloud and out at the edge with Greengrass.

See how to process streaming data with Kinesis and Lambda, store that data in an S3 Data Lake, and make in-place queries, all with Serverless solutions.

Review end-to-end examples

We provide a hands-on opportunity for participants to see the code in action and explore AWS application services to build rich user interactions and powerful data processing solutions.

Who is this offer for?

In-house development teams building new or reinventing existing applications.

Large enterprises wanting to innovate at the speed of agile startups.

Innovators & disruptors who want a competitive edge.

Whiteboarding on new projects

Building on the examples reviewed earlier, we whiteboard with teams on how to architect native solutions using a full range of AWS services.
