Serverless Well Architected Review

OVERVIEW
Mode2 delivers an assessment and custom recommendations using the Serverless lens in the AWS Well Architected Framework. We analyze your deployments against AWS and Mode2's best practices, then recommend enhancements specific to Serverless workloads.

Review Serverless deployments

Mode2 uses the standards established in the AWS Well-Architected Framework and supplement with our best practices for designing, deploying, and architecting your serverless workloads.

Compare with Well Architected

We meet with teams managing the application, and use our framework to evaluate deployments and identify opportunities for improvement.

The assessment covers architecture, software design, service configurations, performance tuning, cost management, logging & monitoring, and operations.

Review meeting

We meet to discuss the findings of the well architected assessment, review details of specific recommendations and provide the opportunity to ask follow-up questions.

Recommendations report

We evaluate our findings and provide a comprehensive report with specific actions to implement the recommendations and remediate any specific findings.

We provide a comprehensive report with our assessment and recommendations for remediating any specific findings.

Who is this offer for?

Companies that need to optimize existing Serverless deployments

Teams who want to get the most out of their Serverless projects
